WORK EXPERIENCE

AI Chatbot Prompt Writer, GoAutomation

September 2024 - November 2024

- I created engaging prompts for AI Customer Service Chatbots.
- This helped to improve customer engagement and interaction for each client.
- As a result, on average, more leads were successful per client.

User Interface Developer, BlueBeck Ltd

June 2023

- The CEO gave me the job of designing the user interface for an AI Chatbot.
- I did this through the Android Studio utilising mainly Kotlin to develop the interface.
- After a follow-up meeting, the CEO was mightily pleased with the interface I developed.

EDUCATION

2024 - present	MEng Computer Science at University of Birmingham	(Forecast Class: 1)
2022 - 2024	A-levels at All Hallows Catholic College	(A*AA)
2020 - 2022	GCSEs at All Hallows Catholic College	(2 A*s, 5 As, 1 B)

PROJECTS

NEA Game Project

January 2023 - February 2024

I created a 2D game for my A-level Computer Science Project which involved using Object Oriented Programming Techniques as well as utilising the Game Engine, Godot. Everything, including character design, code, and level design, I did by myself using the specified game engine as well as Aseprite to create pixelated sprites.

AI Interface for Three

June 2023

During my Work Experience for the tech company BlueBeck, I created a user interface for a Customer Service AI Bot. This was for the phone company Three, which hired BlueBeck to make and design the AI. I designed the interface to look like a standard SMS messaging conversation. I also included a microphone option, allowing users to speak their responses and translate the language for various European languages.

Translator for Hackathon

November 2025

During Year 2 of my University Course, I attended two Hackathons. The first one, my team and I created an application that given a speech or text from the user in a language, can translate it and give it back in another chosen language. We won runner-up for this project.

Memory Application for Hackathon

November 2025

This application was a memory music app where given an image, the application would take the year the image was taken. Then on the user's local Spotify client, play the most popular song of that year.

Portfolio Website

December 2025

Over the Christmas break, I have worked on create my own website using HTML, CSS and JavaScript. This project is a personal one that I will continue to work on and improve as I learn more skills. Presently, the website has multiple pages, links and a download for this CV.

TECHNICAL SKILLS

Programming Languages	C++, C, Java, GDScript, Python, HTML, Kotlin
Operating Systems	MacOS, Microsoft Windows
Application Software	Microsoft Office
Misc.	Problem Solver, Enthusiastic about gaining new skills
