EDUCATION

University of Birmingham

Birmingham, UK

MEng Computer Science

2024 – 2029

- Average Grade: 76.7% (First Class)
- Relevant Modules: Functional Programming (99%), Object-Oriented Programming (94%), Mathematical & Logical Foundations of Computer Science (89%), Theory of Computation (81%), Security & Networks (79%)

All Hallows Catholic College

Macclesfield, UK

A-Levels & GCSEs

2020 – 2024

- A-Levels: Mathematics (A*), Computer Science (A), Physics (A)
- GCSEs: 9 subjects, grades 9–6, including English (9), Mathematics (8) and Computer Science (8)

WORK EXPERIENCE

Go Automation

Remote, UK

Head Developer

Jun 2026 – Present

- Led end-to-end build of an AI-powered, multi-tenant document-collection SaaS (Next.js, React, TypeScript, Supabase/PostgreSQL), with 3 client firms confirmed and queued for onboarding ahead of launch
- Built an AI-assisted engineering workflow (Claude Code + Codex) that gates every AI-generated change behind an independent adversarial review before production, reducing feature delivery time by at least 60%
- Built the full stack (database schema, per-tenant row-level security, backend, front end and an AI-driven document-verification pipeline), enforcing strict data isolation across every client firm
- Directed 2 developers across the document platform and the Mortgage Bridge CRM, owning code review and release gating

Go Automation

Remote, UK

AI Chatbot Prompt Writer

Sep 2024 – Nov 2024

- Built 15 reusable, templated prompt systems, each powering a separate client customer-service chatbot with a standardised structure for consistent behaviour

BlueBeck Ltd

Macclesfield, UK

User Interface Developer

Jun 2023

- Built an Android chatbot UI in Kotlin (Android Studio) for a client deployment (Three), styled as an SMS-style conversation with voice input, delivered as a working prototype for client review

PROJECTS

- Built Mortgage Bridge CRM, a mobile-first installable PWA giving brokers a secure mobile workflow over their GoHighLevel CRM (Node, PostgreSQL, bcrypt-hashed sessions, role-based access, web-push); built the first version and now lead its development
- Launched and hardened an FCA-regulated brokerage website with security headers (HSTS, CSP) and a zero-downtime DNS cutover over the client's live email
- Recovered a decommissioned 18-month-old .NET application with no source repository, reconstructing its logic and data model from build artefacts and migration history
- Built a real-time speech and text translator, taking runner-up at the Builder Club hackathon against 10+ teams, and a photo-to-music app using the Spotify API

ADDITIONAL INFORMATION

Languages: English (Native)

Technical: TypeScript, JavaScript, Python, SQL, C++, C, Java, Kotlin, HTML/CSS; React, Next.js, Node.js; PostgreSQL, Supabase, Git

Interests: Grade 7 guitar and self-taught piano; single-player RPGs (a dedicated completionist); learning Italian
