

DANIEL BAYLAN

DanielJBaylan@gmail.com | +44 7703144054 | [LinkedIn](#) | [Portfolio](#)

Third-year MEng Computer Science student (University of Birmingham, First-Class) building and leading engineering on a pre-launch multi-tenant SaaS platform, including a self-built AI-assisted development workflow with independent review gating. Seeking a 2027–28 Year in Industry placement in software engineering or cyber security.

EDUCATION

University of Birmingham

Birmingham, UK

MEng Computer Science

2024 – 2029

- Average: 76.7% across Years 1 & 2 (First-Class); on track for a First
- Relevant Modules: Functional Programming (99%), Object-Oriented Programming (94%), Mathematical & Logical Foundations of Computer Science (89%), Theory of Computation (81%), Security & Networks (79%)

All Hallows Catholic College

Macclesfield, UK

A-Levels & GCSEs

2020 – 2024

- A-Levels: Mathematics (A*), Computer Science (A), Physics (A)
- GCSEs: 9 subjects, grades 9–6, including English (9), Mathematics (8) and Computer Science (8)

WORK EXPERIENCE

Go Automation

Remote, UK

Head Developer

Jun 2026 – Present

- Led end-to-end build of an AI-powered, multi-tenant document-collection SaaS (Next.js, React, TypeScript, Supabase/PostgreSQL), with three client firms confirmed and queued for onboarding ahead of launch
- Designed and built an AI-assisted engineering workflow (Claude Code + Codex) that gates every AI-generated change behind an independent adversarial review before production, reducing feature delivery time by an estimated 60–90%
- Architected the full stack: database schema, per-tenant row-level security, backend, front end, and an AI-driven document-verification pipeline
- Directed 2 developers across the document platform and a Mortgage Bridge CRM, owning code review and release gating; built the CRM's first version before onboarding them

Go Automation

Remote, UK

AI Chatbot Prompt Writer

Sep 2024 – Nov 2024

- Built 15 reusable, templated prompt systems, each powering a separate client customer-service chatbot and optimised for consistent AI parsing

BlueBeck Ltd

Macclesfield, UK

User Interface Developer

Jun 2023

- Engineered an Android chatbot UI in Kotlin (Android Studio) for a client deployment (Three), styled as an SMS-style conversation with voice input

PROJECTS

- **Mortgage Bridge CRM:** mobile-first installable PWA over GoHighLevel; Node backend, PostgreSQL, script-hashed sessions, role-based access and web-push notifications
- **Regulated Site Launch:** took an FCA-regulated brokerage live; hardened with security headers (HSTS, CSP) and performed a zero-downtime DNS cutover
- **Legacy System Recovery:** recovered a decommissioned 18-month-old .NET application with no source repository, reconstructing its logic and data model from build artefacts and migration history
- **Hackathon Builds:** real-time speech and text translator (runner-up) and a photo-to-music app via the Spotify API
- **NEA Stealth Game:** 2D stealth game built solo in Godot (GDScript); all code, art and level design from scratch

SKILLS & INTERESTS

Technical: TypeScript, JavaScript, Python, SQL, C++, C, Java, Kotlin; React, Next.js, Node.js; PostgreSQL, Supabase, Git; row-level security, REST/webhooks, web security (CSP/headers), automated testing

Languages: English (Native)

Interests: Guitar & piano, gaming, hiking, learning Italian (Duolingo)
